Water Systems of the Deccan: An Applied Reading of Traditional Hydrology

Sample Author**ABSTRACT**

A study of stepwell and tank systems across the Deccan plateau, reading traditional hydrological practice against present-day water management. The paper documents construction logic, seasonal use and community governance, and considers what remains transferable.

Introduction

A study of stepwell and tank systems across the Deccan plateau, reading traditional hydrological practice against present-day water management. The paper documents construction logic, seasonal use and community governance, and considers what remains transferable.

This is sample content prepared to demonstrate the journal platform. The published version would continue with the full argument, its evidence and its apparatus.

Method

Sources are cited by edition, chapter and verse where a primary text carries the argument. Where a translation is the author's own, it is marked as such.

Discussion

Claims about a tradition are distinguished from the author's inference, and modern scientific or social claims are supported by contemporary evidence rather than asserted.
